

Highly flexible
financial management software
for mid size businesses!

FAST FLEXIBLE FINANCIALS
developed by

TCS is a leading provider of highly flexible financial management software that powers mid-sized businesses.

Benefits of Using ORCA

Flexibility

- Object-oriented technology facilitates quick and easy customisation of reports, menus, forms, validation control, and business rules.
- Platform choice (NT, Open VMS, Linux/Unix).
- Multi-company, language and currency capabilities.
- In-built auditing and security with flexible profiles.

Ease of Use

- Offers the familiarity of Excel for ad hoc reporting combined with the power of Crystal reports for standard reporting
- Use of ad hoc query tools enables users to manipulate and access data faster and more readily shortening response times to management queries
- Automated reporting enables users to dramatically reduce period end closing and reporting time

Low Cost of Ownership

- Runs faster on significantly smaller and cheaper platforms
- Simple to maintain, requiring less administration

Exploiting the Power of the Web

ORCA has been designed to use the industry standard TCP/IP protocol for all interfaces. This avoids the need to 'install' specific software on a client machine. Multiple interface access points are offered while ensuring security profiles are enforced. Specifically, this allows for:

- Remote management and support of ORCA systems.
- Intranet access (staff) as users via Web browser or terminal session
- Internet access (trading partners, e.g. customers) as users with limited security allowing product price and availability enquiries, order placement, etc.
- Internet access (public at large) via dynamic HTML access to product catalogue and "shopping cart" functionality.
- Automated distribution of "commercial documents", i.e. purchase orders, payment advices, sales invoices, debtor statements, etc. to suppliers and customers by internet email.

Data Integrity

- Three stage transactional data commit sequence
- Database shadowing options.
- Cluster support
- On-line database backup and recovery including journal file recovery
- Optional independent object, print and data server configuration possible

Application Integrity

- Full system audit trail for all financial updates.
- User definable audit profiles allow monitoring of.
- Read/Write/Delete actions on all data.
- Security profiles allow for the creation and manipulation of user groups to control application access and permissions.

Operating Systems

- Alpha OpenVMS V7.2.1
- Microsoft Windows 9x,
- NT 4SP4+, 2000, and XP
- Red Hat Linux

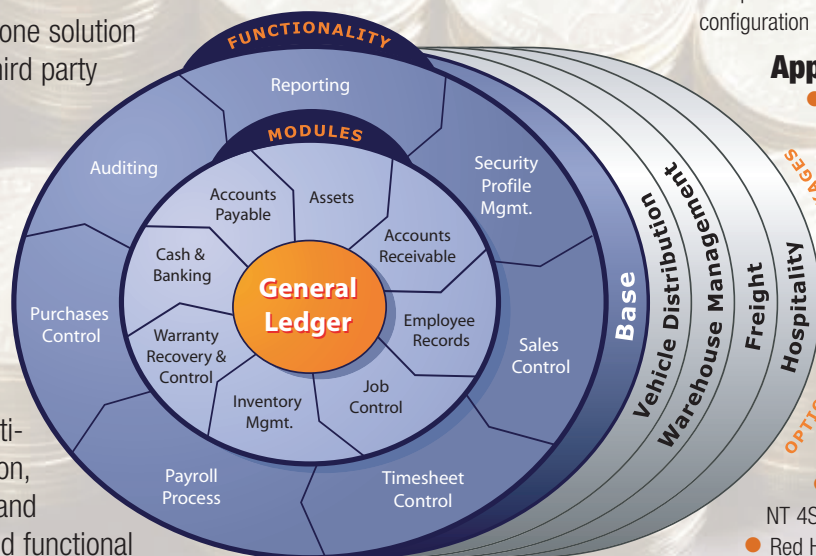

TCS's flagship product, ORCA Financial, is a fully-integrated financial management solution that provides immediate access to more meaningful data so you can make smarter business decisions while significantly increasing productivity.

Unlike our competitors offering an array of software applications, TCS is solely focused on providing best-of-breed financial management solutions. We can quickly and cost-effectively mould our application to meet the unique needs of your business.

ORCA is sold as a stand-alone solution and is also embedded in third party software applications.

Financials and So Much More

The heart of the application is a fully transaction-based object design which supports multi-company, multi-consolidation, multi-currency, multi-user and fully-integrated modular and functional workflow.
